

On-Site Health Screenings — keeping your workforce healthy and your worksite safe

As our nation prepares for a phased reopening during this global pandemic, employers are tasked with developing a strategy to ensure their employees return to a safe environment. On-site health screenings of employees will play an essential role in successfully reducing the chance of an outbreak at worksites and assure employees that their health and well-being is top priority.

Returning to the worksite

Employees are concerned and anxious during this time. As people are taking precautions in their personal lives to eliminate the risk of contraction or spread of COVID-19, they're looking to their employers for the same protection upon return to the worksite. Optum On-Site Health Screenings are conducted as employees enter an employer's facility. Screenings include a temperature check for fever and a quick verbal survey of potential symptoms. This helps employers mitigate risk by reducing exposure to other employees and contamination of the facility.

Optum will provide an employer a minimum of one screener, who is a qualified health professional, per entrance to conduct the screenings. All screeners will be equipped with appropriate personal protective equipment (PPE). Optum will work with each employer to develop a plan for managing traffic flow to get employees screened as promptly and safely as possible. If an individual is presenting symptoms or identifies as a possible carrier of the virus, your company policies and resources dictate the actionable steps.

Tackling the challenge together

Having one of the largest clinician networks in the United States with a dedicated business unit specifically focused on employee well-being, Optum has the expertise to help return employees to their worksites safely and effectively.

This service is subject to availability. Minimum order quantities apply.

Employee experience

Optum On-Site Health Screenings can be tailored to meet the unique needs of your worksites.

Employees arrive at the worksite and are guided through the screening process, while maintaining proper physical distancing protocols.

The Optum clinical screener, protected in PPE, is stationed at each worksite entrance that is accessible to employees. Employees are required to have a screening conducted prior to entering the facility.

Screener verbally completes a short questionnaire with each employee to address any potential symptoms of COVID-19 or recent contact with an individual who has been diagnosed with the virus.

After completion of the questionnaire, employee temperature is taken via a non-touch temporal scanner by the clinical screener and recorded.

If no risk is detected based on questionnaire and temperature check, employee proceeds into the facility.

If risk is detected based on questionnaire and/or temperature check, next steps are dictated by company policy.

The value of partnering with Optum

30+ years meeting the on-site health screening needs of organizations

Coverage in **50 states** to administer screenings

Tailored assessments for your organization

Leverage **existing contracting** to avoid separate 3rd party contracts

Screenings are conducted **DAILY** for all employees entering the worksite.
